3. Building Anonymous FTP SCANNER USING FTPLIB MODULE.

Aim:

To create a python based FTP scanner using the ftplib module that

- checks if a public FTP server allows anonymous sign

Procedure:

* Import the built-in ftplib module.
* Write a python scripts.
* Sender side: connect to the FTP server, login anonymously.
* Run the script in Google colab or any python environment.
* Observe the login status, server message and directly contents.

Code:

```
from ftplib import FTP
# Get FTP server address from
```

```
# Create FTP connection
ftp = FTPC)
Print C" In Connection to FTP Server..")
ftp.connect (host, 21', timeout = 10)
Print C" Connected to:", host)
Print C" checking anonymous FTP
      success...")
ftp login ( user = "anonymous",
          . Passwd = "anonmymous @ex.com")

Print C"In file and directories")
ftp.dir()
ftp.quit()
Print C"In [-] Anonymous FTP login
          is NOT available").
Print ("Reason:", e).
```

Result:

Thus the Python script using ftplib was succesful executed to check anonymous FTP login and display no servers.
